DETAILED ACTION

Response to amendment

The Applicant has overcome the double patenting rejection presented in Paper No. 8 by proper filing of a terminal disclaimer. Also, the applicant has overcome the claim objections presented in Paper No. 8. However, new grounds of rejection are set forth in this office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-15 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the overhead vapor stream" in line 1 of step (d). There is insufficient antecedent basis for this limitation in the claim.

Claim 1 recites the limitation "the liquid stream" in line 1 of step (e). There is insufficient antecedent basis for this limitation in the claim. No liquid stream is produced in step (c). Appropriate correction is required.

Allowable Subject Matter

Claim 1 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action.

Claims 2-15 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not disclose a method for hydroprocessing a hydrocarbon feedstock which employs multiple hydroprocessing zones within a single reaction loop, each zone having one or more catalyst beds, comprising the step of passing an effluent from a hydroprocessing zone to a separator wherein the effluent is contacted with a hot, hydrogen-rich stripping gas to produce a vapor stream and a liquid stream; passing that vapor stream, after cooling and partial condensation, to a hot hydrogen stripper containing at least one bed of hydrotreating catalyst, where it is contacted countercurrently with hydrogen, while the liquid stream is passed to fractionation; passing the overhead vapor stream from the hot hydrogen stripper/reactor to a cold high pressure separator; and passing a liquid stream from the hot hydrogen/stripper reactor to a second hydroprocessing zone.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James Arnold, Jr. whose telephone number is 703-305-5308. The examiner can normally be reached on Monday-Thursday 8:30 AM-6:00 PM; Fridays from 8:30 AM – 5:00 PM with alternate Fridays off.
